

TABLE OF CONTENTS

Preface	1
 Section 1. Numerical and functional analysis	
Definition d'une methodologie de demonstration numerique d'existence de solutions d'equations elliptiques semi-lineaires <i>A. Bamberger</i>	3
Numerical solution of Maxwell's equations in a conductive and polarizable medium <i>A. Bamberger, B. Cockburn, Y. Goldman, P. Joly and M. Kern</i>	11
Un problème de fréquences propres en couplage fluide- structure <i>C. Conca, J. Planchard and M. Vanninathan</i>	27
Numerical analysis for eversion in elastic spherical caps equilibrium <i>G. Geymonat, M. Rosati and V. Valente</i>	39
On Hartree and Hartree-Fock equations in atomic and nuclear physics <i>P.L. Lions</i>	53
 Section 2. Basic numerical techniques	
Finite analytic numerical method for two-point boundary value problems of ordinary differential equations <i>C.J. Chen, M.Z. Sheikholeslami and R.B. Bhiladvala</i>	61
Recent developments in the numerical solution of differential/ algebraic systems <i>L.R. Petzold</i>	77
A high order staggered grid method for hyperbolic systems of conservation laws in one space dimensions <i>R. Sanders and A. Weiser</i>	91
 Section 3. Spectral methods	
Non-conforming spectral element-finite element approximations for partial differential equations <i>C. Bègue, C. Bernardi, N. Debit, Y. Maday, G.E. Karniadakis, C. Mavriplis and A.T. Patera</i>	109

A general formulation for nonlinear initialization of a numerical weather prediction model. Experiments with a shallow-water limited area model <i>R. Juvanon du Vachat</i>	127
A pseudospectral matrix element method for calculation of double diffusive layers near corners <i>H.-C. Ku, T.D. Taylor and R.S. Hirsh</i>	141
Section 4. Adaptive grids and multigrid methods	
Development of a hierarchical and adaptive finite element software <i>G. Adjedj and D. Aubry</i>	153
Compressible viscous flow simulation by multigrid methods <i>F. Angrand and P. Leyland</i>	167
Multigrid domain decomposition methods for elliptic problems <i>Y.A. Kuznetsov</i>	185
Adaptive remeshing for transient problems <i>R. Löhner</i>	195
Section 5. Computer programming environment	
Modelisation dynamique litterale <i>C. Garnier, P. Rideau and Y. Papegay</i>	215
Internal design of the E3D inter-discipline environment <i>J.P. La Hargue and J.P. Mascarell</i>	227
On the design of an expert system guide for the use of scientific software <i>F. LaPorte</i>	241
Section 6. Numerical investigation of plate and shells	
Nonlinear thin shell finite element with six degrees of freedom per node <i>S. Jaamei, F. Frey and P. Jetteur</i>	251
High order sensitivity analysis in shape optimization problems <i>F. Navarrina, E. Bendito and M. Casteleiro</i>	267

Section 7. Numerical investigation of hypersonic flows

Considerations for the development of grid schemes for hypersonic flows

D.D. Cline and J.J. Bertin 283

Applications of the Boltzmann equation within the context of upper atmosphere vehicle aerodynamics

F. Golse 299

Section 8. Numerical investigation of incompressible flows

Iterative methods for the solution of Stokes equations

R. Aboulaich and M. Fortin 317

A combinatorial algorithm for the Euler equations of incompressible flows

Y. Brenier 325

Time accurate solutions of the incompressible and three-dimensional Navier-Stokes equations

H.A. Dwyer and S. Ibrani 333

A new finite element method for computing the flow inside rotating machinery

D. Pelletier, A. Garon and R. Camarero 343

An improved finite element iterative method for 3-dimensional fluid flow problems

M.P. Robichaud, P.A. Tanguy and M. Fortin 359

Finite volume methods for two-dimensional incompressible flows with complex boundaries

W. Rodi, S. Majumdar and B. Schöning 369

Calculation of three-dimensional laminar flows in tee-shaped junctions

A. Samagaio and N.S. Vlachos 393

Section 9. Numerical investigation of compressible flows

Recent improvements in Galerkin and upwind Euler solvers and application to 3-D transonic flow in aircraft design

V. Billey, A. Dervieux, L. Fezoui, J. Periaux, V. Selmin and B. Stoufflet 409

A multi-element group preconditioned GMRES algorithm for nonsymmetric systems arising in finite element analysis <i>F. Shakib, T.J.R. Hughes and Z. Johan</i>	415
Section 10. Numerical investigation of non Newtonian fluid flows	
Numerical solution of cavitation problems in lubrication <i>A. Bermúdez and J. Durany</i>	457
Section 11. Numerical investigation of reactive flows	
Single particle char combustion and gasification <i>G. Ballal, C.-H. Li, R. Glowinski and N.R. Amundson</i>	467
Numerical modelling of flow assisted flame spread <i>C. Di Blasi, S. Crescitelli and G. Russo</i>	481
Section 12. Numerical investigation of electro-magnetic phenomena	
Numerical simulation of semiconductor devices <i>F. Brezzi, L.D. Marini and P. Pietra</i>	493
A new formulation for numerical simulation of electrophoresis separation processes <i>D.K. Ganjoo, W.D. Goodrich and T.E. Tezduyar</i>	515
Etude en éléments finis de faisceaux de particules chargées <i>P. Ravier and J.-P. Penicaud</i>	531
Finite element modelling of weak plasma turbulence <i>S. Succi, K. Appert, G. Radicati, Y. Robert and J. Vaclavik</i>	543
Author Index	557
Subject Index	561
Instructions to Authors	569
